

## Monitored Security

Staying home tonight? Going out? Either way, you need ACCESS.

Because ACCESS allows you to use your monitored security system no matter where you are.

Turn it on from your office--or your Blackberry.

Turn it off from any where you have Internet access.

Or simply make sure the doors are closed and the windows are shut by going online--anywhere in the world.

And ACCESS allows you to integrate your security system with online or TV video cameras so you can see what's going on all over your house.

Or you can integrate it with lighting, heating and cooling systems, so your house is warm, cool, or lit up whenever you want it to be.

Imagine this: in case of fire, your house will automatically shut down the HVAC, trigger fire alarms, light an exit route inside the house and flash exterior lights to alert the authorities.

Now that's what we call security.
